How are teens taught about navigating social media, and how can AI help?

Study

This study invites educators to try out our latest **ChatGPT-based educational chatbot builder** and build their own chatbot. **No technical background** is necessary.

The goal is to better understand, from the **perspective of the educators**, how teens are taught about navigating social media, how conversational AI can help this education process, and which tools educators would need to influence and shape this education process.

Participants will be asked to

participate in a **1-hour** remote interview via **Zoom**.

Participants will receive

$25 per hour for their participation in the form of an Amazon e-voucher.

How to participate

Please **sign up [here](#)** and we will reach out to you shortly.

If you have any questions, feel free to reach out to Dr. Michael A. Hedderich at mah499@cornell.edu
